

# CURIOUS BOX

Today at school, we learned how airplanes stay in the air.

Through the “Let’s Make a Model Airplane” activity, we built a wooden airplane and learned about different types of transportation and vehicles. We also discussed the rules we must follow when using transportation.

You can spark their curiosity by asking questions like:  
“Why does the front of an airplane face forward?”  
“Which animal inspired the design of its wings?”

Stay curious and stay scientific!
