

CURIOUS BOX

Today at school, we did the “Life Cycle of Living Things” activity and explored the life of a butterfly step by step.

Our children modeled the butterfly’s egg, caterpillar, chrysalis, and adult stages, observing how a living being’s life cycle progresses. In this way, they learned that the development of living things occurs in successive stages. At home, you can ask your child: “What stages are there in a frog’s life cycle?”

Stay curious and keep exploring science!
