

CURIOUS BOX

Today at school, we had so much fun with the Monster Bag activity.

In this experiment we carried out with Keşif Kutusu, we observed how the bag inflated when we brought different substances together. Our children discovered that when some substances combine, they can react, and as a result of this reaction, gas can be formed.

Throughout the activity, their observation skills and ability to establish cause-effect relationships were supported.

You can also talk with your child about the activity by asking questions like “Why did the bag inflate?”

Stay curious and keep exploring science!
