

# CURIOUS BOX

Today at school, we carried out the Sound of My Heart activity, experiencing the excitement of creating our own stethoscopes. We assembled the pieces to complete our stethoscopes and then compared sound technologies used in the past and today.

At home, you can listen to the sounds of your body with a stethoscope together with your child. By talking about which organs are being listened to and which sounds doctors pay attention to, you can support your child's journey of discovery.

Stay curious and keep exploring with science!

## SOUND OF MY HEART
