

CURIOUS BOX

Today at school, we had so much fun with the "Making a Windmill" activity.

In this activity, our children designed their own windmills and discovered that wind is a source of energy. By observing the windmill spin when the wind blew, they realized that an invisible energy can create movement.

At home, you can talk about the activity with your child by asking questions like, "Would the windmill spin if there was no wind?" or "Where is wind energy used?"

Stay curious and keep exploring science!

MAKING A PINWHEEL
