

# CURIOUS BOX

Today, our students observed homogeneous and heterogeneous mixtures.

We explored methods that can be used to separate mixtures encountered in daily life, selected appropriate techniques, conducted experiments, and recorded our observations.

Through these activities, our children developed their scientific thinking and observation skills while learning about the properties of mixtures and separation methods.

At home, you can reinforce this learning by conducting simple mixture separation experiments together with your child.

Stay curious and keep exploring science!

## SUN, WATER MINERAL
