

CURIOUS BOX

Today, we conducted the “Climate Heroes” activity with the scientists of the future!

Our students learned to raise awareness about climate change by modeling glaciers. During the activity, they created a blue polar model, placed polar animal figures on it, and discussed the effects of melting glaciers on nature and living beings.

You can reinforce the activity with your students by asking:

“How would the lives of polar animals change if the glaciers melted?”

Stay curious and stay scientific!

CLIMATE HEROES
