

Today, our students designed and made their own shower gels as part of the “Imagine – Design – Produce” activity.

During the process, they used innovative thinking skills to create a product beneficial to society, discussing its purpose, target users, and ways it could be improved.

At home, you can encourage your children to generate ideas by asking:
“How could this everyday product be made more useful?”

Stay curious and keep exploring science!

IMAGINE, DESIGN,
PRODUCE
